5G “Trapped Value”

4G vs 5G

The background of the slide is a composite image. On the left, there is a large, stylized graphic of a clock face. The '4G' is positioned at the top left, and the '5G' is at the bottom right. A red line, resembling a clock hand, points towards the '5G'. The background of the clock face is a blue grid with glowing dots. To the right of the clock face, there is a city skyline with several tall buildings. Overlaid on the city and the clock face is a network diagram consisting of many small white dots connected by thin white lines, forming a complex web. The text 'Massive Investment' is written in a bold, dark blue font in the upper right quadrant of the image.

Massive Investment

Re-Architecting Data Networks and the Cloud:
Rise of **Edge Computing** and **Micro-Cells**

Internet of Things & Industrial IoT

Industry 4.0: Linking **Operational Technology (OT)** and **Information Technology (IT)**

Reduce Downtime

Lower Cost

Industrial IoT

Retail

- Digital signage
- In-store offering & promotions
- Supply chain
- Smart ordering & payment
- Vending machines

Healthcare

- Adherence & support
- Clinical
- Virtual care
- Wellness & prevention

Connected Car

- Assisted & autonomous driving
- Fleet management
- In-vehicle infotainment
- Shared mobility
- Smart navigation
- Vehicle assistance

Smart Cities & Energy

- Construction
- Education
- Energy
- Environmental
- Roads, traffic & transport
- Social & security
- Water & waste

Natural Resources

- Agriculture
- Mining
- Oil & gas

Connected Industry

- Connected field
- Digital factory
- Product design & engineering
- Smart maintenance
- Supply chain management

\$500 billion GDP contribution over the next 7 years
Shift to shared vehicles used 80% of time vs. 5% of private

ACES: \$200 Billion Invested Since 2010

AUTONOMOUS, CONNECTED, ELECTRIC AND SHARED

Level 0: There are no autonomous features.

Level 1: These cars can handle one task at a time, like automatic braking.

Level 2: These cars would have at least two automated functions.

Level 3: These cars handle “dynamic driving tasks” but might still need intervention

Level 4: These cars are officially driverless in certain environments.

Level 5: These cars can operate entirely on their own without any driver presence.

ACES: \$200 Billion Invested Since 2010

AUTONOMOUS, CONNECTED, ELECTRIC AND SHARED

Within 1 Year

Level 0: There are no autonomous features.

Level 3: These cars handle “dynamic driving tasks” but might still need intervention

Level 1: These cars can handle one task at a time, like automatic braking.

Level 4: These cars are officially driverless in certain environments.

70% of all miles in 5 years”

Level 5: These cars can operate entirely on their own without any driver presence.

Vehicle-to-Everything (V2X) and Cellular V2X (C-V2X)

MORE STRINGENT TESTING AS LIFE CRITICAL

V2X

- See-through, 360-degree non-line-of sight sensing and extended range
- Convey intent by sharing sensor data and path planning
- Improve situation awareness via increased electronic horizon for soft safety alerts

CV2X

- Real-time warnings to prevent chain collision and better accident prevention
- eCall when the vehicle senses an accident

Significant market reaching \$62.7 Billion by 2023
